

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	CASA COLINA HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190137
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/19/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	<a href="https://www.casacolina.org/community-equity/">https://www.casacolina.org/community-equity/</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

888

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	791	888	89
Spanish Language	83	888	9
Asian Pacific Islander Languages	9	888	1
Middle Eastern Languages	4	888	0.5
American Sign Language	0	888	0
Other Languages	2	888	0.2

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:  
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

#### CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

#### CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

#### CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

### **Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)**

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

291

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

872

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

33.4

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

<b>Social Driver of Health</b>	<b>Number of positive screenings</b>	<b>Rate of positive screenings (%)</b>	<b>Number of positive screenings who received intervention</b>	<b>Rate of positive screenings who received intervention (%)</b>
<b>Food Insecurity</b>	10	3.4	8	80
<b>Housing Instability</b>	54	18.6	44	81.5
<b>Transportation Problems</b>	9	3.1	7	77.8
<b>Utility Difficulties</b>	8	2.7	5	62.5
<b>Interpersonal Safety</b>	4	1.4	3	75

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

196

Total number of respondents to HCAHPS Question 19

216

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

90.7

Total number of people surveyed on HCAHPS Question 19

216

Response rate, or the percentage of people who responded to HCAHPS Question 19

100

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native	suppressed	suppressed	suppressed	suppressed	suppressed
Asian	15	18	83.3	18	8.3
Black or African American	suppressed	suppressed	suppressed	suppressed	suppressed
Hispanic or Latino	30	32	93.8	32	14.8
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)	39	46	84.8	46	21.3
Native Hawaiian or Pacific Islander					
White	100	107	93.5	107	49.5

  

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18	0	0	0	0	0
Age 18 to 34	0	0	0	0	0
Age 35 to 49	13	13	100	13	6
Age 50 to 64	42	46	91.3	46	21.3
Age 65 Years and Older	141	157	89.8	157	72.7

  

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female	108	117	92.3	117	54.2
Male	88	99	88.9	99	45.8
Unknown	0	0	0	0	0

  

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare	142	158	89.9	158	73.1

<b>Gender Identity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
Female	108	117	92.3	117	54.2
Female-to-male (FTM)/ transgender male/trans man					
Male	88	99	88.9	99	45.8
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

180

Total number of respondents to HCAHPS Question 17

193

Percentage of respondents who responded "yes" to HCAHPS Question 17

93.3

Total number of people surveyed on HCAHPS Question 17

193

Response rate, or the percentage of people who responded to HCAHPS Question 17

100

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "yes" responses</b>	<b>Total number of responses</b>	<b>Percentage of "yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
<b>American Indian or Alaska Native</b>	0	0	0	0	0

Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:  
<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

1

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

33

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

# Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

Number of in-hospital deaths among patients aged 18-89 years old or obstetric patients with serious treatable complications

1

Total number of surgical discharges among patients aged 18-89 years old or obstetric patients

88

Rate of in-hospital deaths per 1,000 surgical discharges, among patients aged 18-89 years old or obstetric patients with serious treatable complications

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

NA

Total number of nulliparous NTSV patients

NA

Rate of NTSV patients with Cesarean deliveries

NA

Table 7. Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of NTSV patients with cesarean deliveries</b>	<b>Total number of NTSV patients</b>	<b>Rate of NTSV patients with Cesarean deliveries (%)</b>
American Indian or Alaska Native			
Asian			
Black or African American			
Hispanic or Latino			
Middle Eastern or North African			
Multiracial and/or Multiethnic (two or more races)			
Native Hawaiian or Pacific Islander			
White			

  

<b>Age</b>	<b>Number of NTSV patients with cesarean deliveries</b>	<b>Total number of NTSV patients</b>	<b>Rate of NTSV patients with Cesarean deliveries (%)</b>
Age < 18			
Age 18 to 29			
Age 30 to 39			
Age 40 Years and Older			

  

<b>Sex assigned at birth</b>	<b>Number of NTSV patients with cesarean deliveries</b>	<b>Total number of NTSV patients</b>	<b>Rate of NTSV patients with Cesarean deliveries (%)</b>
Female			
Male			
Unknown

Additional gender category or other			
Not disclosed			

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

NA

Table 8. Vaginal Birth After Cesarean (VBAC) Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Table 9. Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

21

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

872

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

## 2.4

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Male	2.1	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth			Male	2.1	1.3
HCAHPS survey: Received information and education	Preferred Language			Spanish Language	94.3	1.2
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Race and/or Ethnicity			Multiracial and/or Multiethnic (two or more races)	93.8	1.1
HCAHPS survey: Received information and education	Race and/or Ethnicity			Multiracial and/or Multiethnic (two or more races)	100	1.1
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Age (excluding maternal measures)			65 and older	100	1.1
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Expected Payor			Medicare	96.2	1.1
HCAHPS survey: Received information and education	Sex Assigned at Birth			Male	95.2	1
HCAHPS survey: Received information and education	Gender Identity			Male	95.2	1
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Sex Assigned at Birth			Male	92.3	1

#### Plan to address disparities identified in the data

The top two ranked disparities were in the measure related to readmission rate. Analysis of readmission rates by sex demonstrated that women were the best-performing group, with a readmission rate of 2.1, while men represented the lowest-performing group, with a 2.8 readmission rate. The goal is to reduce the readmission rate among men to ?2.45 within the next year by ensuring that at least 90 of male discharges are screened for social determinants of health (SDOH) and that appropriate support services are provided to address identified risk factors. Additional efforts will focus on strengthening discharge education for men through the teach-back method to verify comprehension and reinforce adherence to follow-up care. Implementation of these strategies aims to improve continuity of care and reduce preventable readmissions in this population. Four of the top ten identified disparities were associated with the measure evaluating the provision of written discharge education related to the medical diagnosis and symptoms to monitor after discharge. The analysis showed that Spanish-speaking patients had an 80 compliance rate with a rate ratio (RR) of 1.179 compared to the highest-performing group, English-speaking patients, at 94.3. Multi-Race patients had an 89 rate (RR = 1.124) compared to the highest-performing group, Black patients, at 100. Male patients had a 90.9 rate ratio (RR = 1.047) compared to the highest-performing group, female patients, at 95.2, with similar values identified for the gender identity and sex categories. The goal for each disparity is to reduce the gap between the identified group and the highest-performing group by 50 within the next year. Planned interventions include strengthening discharge education

by ensuring materials are provided in the patient's preferred language, integrating interpreter services, and confirming understanding through use of the teach-back method. In addition, staff training will be implemented to enhance culturally competent, patient-centered care. Training content will emphasize cultural humility, effective communication, implicit bias awareness, family and social dynamics, and an understanding of the healthcare beliefs of the diverse populations served. The remaining three disparities were associated with the patient experience measure evaluating the willingness to recommend the facility to family or friends. Analysis identified the following disparities: Asian patients had an 83.3 positive response rate with a relative risk of 1.126 compared to the highest-performing group, White patients, at 93.8; patients aged over 65 years had an 89.8 rate (RR = 1.114) compared to the highest-performing group, those aged 35-49 years, at 100; and Medicare patients had an 89.9 rate (RR = 1.070) compared to the highest-performing group, private pay patients, at 96.2. The goal for each disparity is to decrease the gap between the identified disparity group and the highest-performing group by 50 within the next year. Interventions to address these gaps will include staff education focused on enhanced communication and teaching strategies for patients aged 65 years and older, emphasizing the use of plain language, visual aids, and teach-back techniques while accounting for hearing, vision, or cognitive limitations. The Commit to Sit initiative will also be used to promote empathy, active listening, and effective communication during patient interactions. Additionally, a targeted survey will be conducted among Asian patients to identify key drivers of dissatisfaction and gather actionable insights to guide quality improvement efforts and improve the overall patient experience.

## **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### **Person-centered care**

The organization is committed to providing person-centered care that is respectful of and responsive to the individual needs, preferences, and values of each patient. The Patient and Family Advisory Council (PFAC) plays a key role in advancing patient-centered practices, representing a diverse cross-section of the community in terms of race, ethnicity, gender, sexual orientation and age, and providing direct input into organizational policies, programs, and improvement initiatives. The integration of the PATH assessment tool within rehabilitation services enables the organization to identify and address discharge barriers and concerns identified by patients and their caregivers. As an employer committed to fair hiring practices and is committed to promoting diversity we have a workforce that reflects the racial and ethnic diversity of the community it serves, thereby enhancing culturally concordant care. Organization leaders are committed to the strategic initiative to increase board diversity with the goal of strengthening philanthropic engagement and expanding free and charitable care. Additionally, the organization has invested in ? face-time? language services and three-way calling capabilities to improve communication among patients, caregivers, and providers, fostering inclusive care coordination and patient engagement.

### **Patient safety**

The organization maintains a strong commitment to patient safety and the reduction of risk across all stages of care delivery. A culture of safety is actively fostered through leadership engagement, ongoing staff education, and structured feedback mechanisms that promote transparency and accountability. Results from the most recent Press Ganey Employee Safety Culture

Survey demonstrated performance exceeding national benchmarks across all measured safety and culture domains, with an overall safety culture score of 4.13 compared to the national average of 3.95. The organization participates in two patient safety organizations to enhance, data-driven benchmarking, and system-wide safety improvements. The Organization has made a commitment to zero patient harm as one of the organizations aspirational goals. A focused effort on the prevention of hospital-acquired pressure injuries (HAPT) resulted in an 80 reduction in 2024.

#### Addressing patient social drivers of health

Addressing social determinants of health (SDOH) continues to be a strategic priority. In 2024, the organization implemented the Accountable health Communities Health-related Social Needs Screening Tool (AHC HRSN) core questions. The tool is a standardized screening process to assess key risk factors such as housing, income, food security, and transportation. Patients identified with unmet needs are provided with community-based resources. Furthermore, access to the findhelp.org website is provided to patients through our patient access portal. The governing board identified SDOH as a key action item in the 2025 Strategic Plan, reinforcing organizational commitment to reducing health disparity and reducing advancing health equity for vulnerable populations.

### **Performance in the priority area continued**

Performance across all of the following priority areas.

#### Effective treatment

The organization remains dedicated to providing evidence-based, timely, and appropriate clinical care to all patients. Clinical teams consistently apply established best practices to guide treatment decisions, ensuring quality, consistency, and equity in clinical outcomes. This commitment to disease-specific excellence has earned the organization Joint Commission Disease-Specific Certification for Advanced Hip and Knee Replacement, as well as Specialty Certification through the Commission on Accreditation of Rehabilitation Facilities (CARF) for Brain Injury, Spinal Cord Injury, and Stroke programs. In recognition of its leadership in infection prevention and responsible antimicrobial use, the organization was also awarded the Bronze Antimicrobial Stewardship Honor Roll by the California Department of Public Health for promoting optimal antimicrobial use, preventing antibiotic resistance, and improving patient outcomes.

#### Care coordination

Care coordination remains a core element of high-quality care delivery. The implementation of the PATH assessment tool is enhancing the organization's ability to identify patient and caregiver needs during transitions of care, supporting safe discharge planning and improved continuity across care settings. The Patient and Family Advisory Council (PFAC) also plays an active role in evaluating and advising on care transition processes, contributing to the development of patient and family resources that improve transition from inpatient rehabilitation to the home environment. Additionally, the organization continues to collaborate with community agencies and benefit programs to connect patients with local support services that address post-discharge needs and social determinants of health, ensuring a holistic and sustainable recovery process. The organization has a dedicated Patient Navigator to guide and assist individuals throughout the total joint replacement process, improving patient engagement, education, and overall care coordination.

#### Access to care

Ensuring equitable and timely access to care remains a key organizational priority. The organization has strengthened partnerships with local hospitals and community providers to enhance limb preservation programs for patients with diabetes, with a focus on reducing disparities among

Spanish-speaking populations. These efforts include providing health screenings, education, and financial assistance to improve clinical outcomes and promote health equity. To further support culturally responsive care, a Spanish-speaking diabetes educator was hired to expand outreach and education within the community, in alignment with priorities established by the Diversity Task Force. The organization also collaborates with a regional trauma center to ensure timely access to post-acute rehabilitation services and to initiate rehabilitation planning early, supporting the best possible recovery for patients following a traumatic injury. In addition, the organization continues to expand services to reduce wait times and improve access across the continuum of care and multiple service lines. The organization is committed to eliminating barriers by providing patients with timely and secure access to their health-related data through an ADA compliant patient portal and investment operationalization of interoperability standards.

## **Methodology Guidelines**

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
